

January 2023

De-icer was installed after the ice had formed, notice the small footprint of open water.

The direction of the device appears to be pointing up

Nov. 28, 2023 - My husband texted our neighbour, asking him to adjust the de-icer so it didn't create open water on our shoreline. Everywhere else on the lake had ice forming to the shore. My husband followed up on Nov. 30 as the pump had not been adjusted yet.

Dec. 2, 2023 - I texted the neighbour asking if she could power off the pump or redirect the pump so that ice can form on our shoreline.

December 10, 2023

De-icer continues to cause
issues with ice formation

December 19, 2023

Continued issues with ice formation

Other areas on Thunder Lake are using skating rinks

December 23, 2023

January 1, 2024

We went away on vacation. We came home and some ice had formed.

My kids were so excited to shovel off a skating rink!

January 2, 2024

The day after my son shovelled
the skating rink!

January 5, 2024

Continued areas of open water/unsafe ice beyond the warning pylons during a period of colder temperatures

January 7, 2024

After days of very cold weather, my husband attempted to drive the quad on the ice to clear a skating rink.

The quad fell through the ice

January 8, 2024

Large area of open water,
notice the snowmobile
tracks crossing closeby

January 14, 2024

My husband shovelled off a path in hopes that removing the insulating snow would allow ice to form so we could access the lake safely on ATV or snowmobile

January 20, 2024

After cold snap (-20s), my husband was able to use the shoveled path to go on the snowmobile. Afterward, he walked on the ice to the left side of the snowmobile tracks and his foot went through causing the open water noted in the photo. This was very concerning as my 13 year old son had also used the snowmobile earlier that day.

January 20,
2024

January 24, 2024

Continued unsafe ice

My husband hand shoveled a skating rink in days leading up to this, but was not able to plow the rink with a quad all winter long

Feb 22, 2024

Large area of compromised ice
along the north shore

Feb 22, 2024

Are of compromised ice,
approximately 300 meters
East from the de-icer
